

# Autodesk makes software for people who design and make things

*We help people  
make more things,  
make them better,  
and make them  
with less.*

**Andrew Anagnost**  
President and CEO, Autodesk

Founded in 1982, Autodesk is a global leader in design software for the architecture, engineering, construction, media and entertainment, and manufacturing industries. Our products enable people to design and make anything, from everyday products and cars to buildings, bridges, games, and movies.

Today's dominant demographic, environmental, and technology trends are driving businesses and consumers alike to fundamentally rethink how we design, make, and use things. This rapidly changing landscape creates unprecedented opportunities for those with the right tools and expertise.

With a comprehensive portfolio of design, engineering, and fabrication software, and deep cross-industry experience and insights, Autodesk is uniquely positioned to help designers, builders, and creators thrive in the future of making things. Our software harnesses the power of emerging technologies—such as additive manufacturing (3D printing), machine learning, artificial intelligence, and generative design—which give companies and individuals the power to design, collaborate, build, and fabricate in ways previously unimaginable.

*Autodesk is in one of the best positions to change outcomes on the planet, because we supply the tools that make... everything.*

**Jeff Kowalski**  
Senior Vice President,  
Chief Technology Officer,  
Autodesk

## Our customers

Over 200 million people worldwide use Autodesk software to unlock their creativity and solve important design, business, environmental, and societal challenges, pushing the boundaries of design in manufacturing, AEC (architecture, engineering, and construction) and M&E (media and entertainment).
